

RESUME (as of September 2016)

Euiso Choi, PhD, PE
email: echoi@korea.ac.kr

Director of Innovative Water Center, NPIC, Phnom Penh, Cambodia from
October 2013

Professor Emeritus of Architectural, Civil and Environmental Engineering,
Korea University, Seoul, Korea

Member of Korea Academy of Science and technology and
Member of National Academy of Engineering of Korea

My major research interest has been concentrated on the process development particularly in biological processes including nutrient removal. I have worked for about 40 years as a professor at Korea University in Seoul, Korea and served as a national representative for the IAWQ and IWA from 1997 to 2006 before my retirement. Also I have involved in consulting works for government and industries for water problems.

Currently I am staying in Phnom Penh, Cambodia for innovative water center (iWc) as a director. The Innovative Water Center was established in 2013 to promote the water and sanitation levels in Cambodia with educating and training native professionals with supports from the Korean Ministry of Science, ICT and Future Planning and National Research Foundation. The iWc has been conducting R&D projects looking for innovative and sustainable solutions for water problems through evaluation of existing and demonstrative systems. The results obtained from the center will be shared with neighboring countries and some of them certainly provide business opportunities.
